

Worksheet: Map your workflow

**Use the table at the bottom of this document to follow the steps in this worksheet.*

Step 1: List three goals you want to accomplish at work

First, let's define what you want to achieve. In the first column of the table, list three goals for this month. For example:

- Prepare a quarterly performance report
- Build a social media calendar for my client
- Research ideas for products or services to expand my business
- Revamp my company's onboarding process
- Improve sales conversion rates for a product or service
- Review active vendor contracts and assess for renewal
- Write help center articles to help customers access the information they need

Step 2: Map out the required tasks

Now, let's break down each goal into smaller, concrete steps. For each goal you listed in Step 1, think about all the individual tasks required to get it done. Use the second column of the table to add your tasks. Be specific and clear about what you will actually be doing.

Let's say your goal is to prepare a quarterly performance report. You would need to complete the following tasks:

- Identify key data sources and metrics to include in the report
- Analyze performance trends by comparing current KPIs to the previous quarter
- Develop visual charts and graphs to illustrate the data
- Draft a quarterly report, focusing on growth areas and opportunities for improvement
- Create a summary of the report highlighting the biggest wins and challenges for the quarter
- Present your findings

You can also use Gemini to help break up your goal into tasks. In a new conversation with Gemini, paste the prompt below and replace the text in [brackets] with your own details.

Before the end of the month, I want to [goal description]. Acting as an expert project manager, list five tactical tasks I need to do to accomplish this goal.

Step 3: Consider how AI can help

As you list your tasks in the table, think about all the ways AI could help you with them. Add those notes in the third column of the table. For example, AI can help you..

- Clean up your data sources by identifying duplicate data, missing values, and formatting issues
- Calculate percentage shifts, growth rates, and variance against the previous quarter
- Create a visualisation (e.g. a bar chart) to communicate your findings to stakeholders
- Generate a report outline based on key findings in the data
- Synthesize all findings to suggest the most important takeaways
- Improve your presentation delivery and give you feedback

Step 4: Rate your tasks

Next, rate all the tasks you've listed against the attributes in the final three columns of the table. Tasks that rate highly in any attribute are good candidates for AI. However, tasks that rate highly in multiple attributes or that appear across multiple goals are the best candidates for building an app. This exercise will help you distinguish between these opportunities.

- **Time Spent:** How long does this task take? (Low = minutes, Medium = an hour, High = several hours)
- **Frequency:** How often do you do it? (Low = a few times a month, Medium = weekly, High = daily)
- **Repetitiveness:** Is the task basically the same every time you do it? (Low = it's different every time, Medium = some elements are the same, High = it's nearly identical every time)

Step 5: Identify tasks where an app can provide the most value

Review your completed table and look for patterns and pain points. Consider tasks that:

- **Rate highly across attributes:** A 'high' rating in all three attributes is an obvious indicator of a task where an app can provide value. However, that is not a requirement. A repetitive task that you do every day (high frequency), but only takes a few minutes (low time spent), could still be a good task for an app.
- **Appear across multiple goals:** These are high-impact activities.
- **Rate highly across attributes and across multiple goals:** These tasks are your prime candidates for an app.

Highlight any tasks that you identified as good candidates for an app in column 2. For all other tasks, consider prompting Gemini to help you instead.

Workflow table

Step 1	Step 2	Step 3	Step 4		
Goals for the month	Tasks	How AI can help	Time Spent	Frequency	Repetitiveness
<i>E.g., Build a social media calendar for my company</i>			Low ▾	Low ▾	Low ▾
			Low ▾	Low ▾	Low ▾
			Low ▾	Low ▾	Low ▾
			Low ▾	Low ▾	Low ▾
			Low ▾	Low ▾	Low ▾
<i>E.g., Finish user research for a project</i>			Low ▾	Low ▾	Low ▾
			Low ▾	Low ▾	Low ▾
			Low ▾	Low ▾	Low ▾
			Low ▾	Low ▾	Low ▾
			Low ▾	Low ▾	Low ▾
<i>E.g., Revamp my company's onboarding process</i>			Low ▾	Low ▾	Low ▾
			Low ▾	Low ▾	Low ▾
			Low ▾	Low ▾	Low ▾
			Low ▾	Low ▾	Low ▾
			Low ▾	Low ▾	Low ▾
Reference Time Spent: Low = Minutes Medium = An hour High = Several hours Frequency: Low = A few times a month Medium = Weekly High = Daily Repetitiveness: Low = Different every time Medium = Some repeated elements High = Nearly identical every time
