

Debug Depot: Services & Capabilities 2025

Our Mission

We empower small businesses to work smarter, faster, and more securely.

Our Process

We follow a five-step lifecycle to ensure technical solutions are deeply integrated and sustainable for your team.

1. **Diagnostics**
 - We begin by deeply embedding with your team to understand your specific needs and pain points.
2. **Solutions Design**
 - We design solutions tailored to achieve your goals, built upon your existing infrastructure.
3. **Implementation**
 - We work alongside you to deploy solutions and ensure the technology works for you.
4. **Capacity Building**
 - We empower your people to own the solution, providing the training and knowledge needed for long-term success.
5. **Support**
 - We serve as your long-run partners, stepping back in as needed to ensure ongoing success and technical health.

Core Capabilities

1. Data & Analytics

At Debug Depot, we transform raw data into a strategic asset. Our focus is on building a robust measurement framework that delivers actionable intelligence for data-driven decision-making.

- **Google Analytics 4 (GA4) Implementation & Configuration:** We implement custom, event-driven data layers that go beyond default "Enhanced Measurement" for business-specific tracking.
- **Looker Studio Reporting & Dashboards:** We build dynamic, interactive dashboards that serve as a single source of truth for your KPIs, powered by live data connections.
- **Actionable Data Interpretation:** We translate data into strategic insights, providing clear recommendations rather than just presenting numbers.

2. Workspace Admin Services

A comprehensive, hands-on Google Workspace Administration service designed to be your business's complete technical solution.

- **Efficient User Lifecycle Management:** Handling the full lifecycle of every user account, including onboarding, password management, and offboarding.
- **Custom Application Control:** Managing access to Google Workspace core services (Gmail, Calendar, Drive) and third-party apps based on user or group permissions.
- **Robust Security Configuration:** Regular audits and configuration of security settings, including Two-Step Verification (2SV), Context-Aware Access (CAA), and advanced spam/phishing protection.

3. Website and Local SEO

We ensure your business is discoverable and stands out in local search results while providing a fast, reliable user experience.

- **Google Business Profile (GBP) Management:** Treating your GBP as a critical marketing channel—often the first interaction a local customer has with your brand.
- **Google Tag Manager (GTM) Implementation:** Centralizing website tracking to ensure efficient, accurate, and scalable data collection without constant developer intervention.
- **Actionable Local SEO Advice:** Ongoing, practical guidance to climb local search rankings and reach customers in your specific geographic area.

Conclusion

Ready for what's next? Let's talk.

Thank You.
